

Advanced Capabilities. Superior Quality. Complete Service.

BFG Manufacturing Services

To meet our customers' most challenging requirements, BFG Manufacturing Services offers electrocoating (ecoating) and zinc-nickel plating.

- Ten daily trucks provide delivery to all of Pennsylvania, as well as to locations in New York, Maryland and Ohio
- ISO 9001-2000 certification pending
- Online order status system via the Internet available to customers at all times

ELECTROCOATING

Electrocoating is a process that uses electric current to deposit paint onto a part. A DC charge is applied to metal part while immersed in a bath of oppositely charged paint particles. The paint particles adhere to the part, forming an even, continuous film over every surface, making the process ideal for parts with intricate or hard to reach areas.

Advantages

- Large Parts Capability – can handle parts as large as 20' x 10' x 3'
- Corrosion Resistant – the process will give over 1000 hours of salt spray to red rust
- Durable Coating – highly resistant to chipping and is chemical resistant
- Superior Finish – film thickness is uniformly deposited over the entire surface of the part
- Environmentally Friendly – low VOC and HAPs coating

ZINC-NICKEL PLATING

Using process controls that ensure the quality you need, BFG is that hard-to-find source for your zinc-nickel plating requirements. The plating process uses a zinc alloy with a few percent of nickel, providing substantially more corrosion resistance.

Advantages

- Provides Superior Corrosion Resistance – protects the base metal for over 1000 hours to red rust
- Withstands High Temperatures – can be used for automotive components that are exposed to higher temperatures
- Economical – provides much better corrosion resistance for any steel part intended for exterior use than comparably-priced conventional zinc

With over 50 years of experience and three of the most technologically advanced facilities in the industry, BFG can meet the most demanding plating requirements including:

- High Volume
- Quick Turnaround
- Challenging Process Requirements
- Customized Packaging & Delivery
- Competitive Pricing
